

**DUAL
FUEL**

A Great Heating and Cooling System for North Missouri Residents.

The dual fuel heating and cooling system features an electric air source heat pump and propane furnace combination. More than 1,000 FEC members are currently using this type of heating and cooling system.

- Heat with the cheapest energy source based on the outside temperature.
- A normal winter requires only one tank of propane.
- Newer heat pumps offer improved efficiencies.
- Works great with existing propane furnaces.
